

17C3 A/D MCU RE-STORED A/D BOARD PROGRAMMING TO ORIGINAL SETTINGS:

This procedure was developed to Restore the MCU-EEPROM memory on the monitor's A/D board to the original setting, prior to performing the "17C3 A/D MCU Re-Programming procedure".

1. Press the following keys in that sequence to enter "Factory Mode":

a. Menu Key → Right Key → Left Key → Up Key → Down Key.

The "Factory Mode" OSD screen appears, you are now in "Factory Mode" (See Image #1).

Image #1

2. Press the "Down Key", until "SPECIAL SET" is selected, then press "Right Key" (See Image #2).

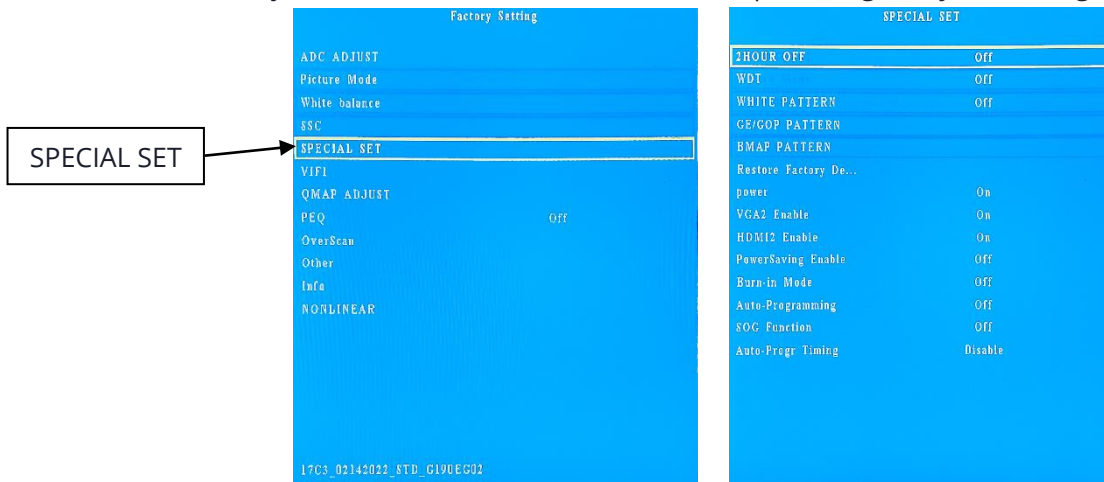

Image #2

- If "Auto-Progr Timing" indicates "Enable", that means "MCU RE-PROGRAMMING PROCEDURE" function has performed and there is a timing stored in the memory (See image #3).

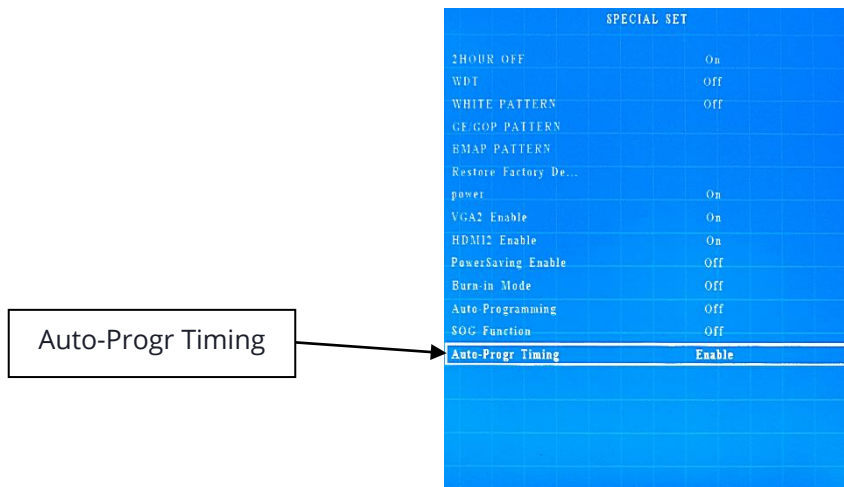

Image #3

- To disable the re-programming, press "Down Key" until "Auto-Progr Timing" is selected and then press "Right Key" (See Image #3). Press "Right Key" and select "Disable" (See Image #5 and #6)
